LAB EXP 4

Appointment Booking System Using Zoho Creator (SaaS)

AIM:

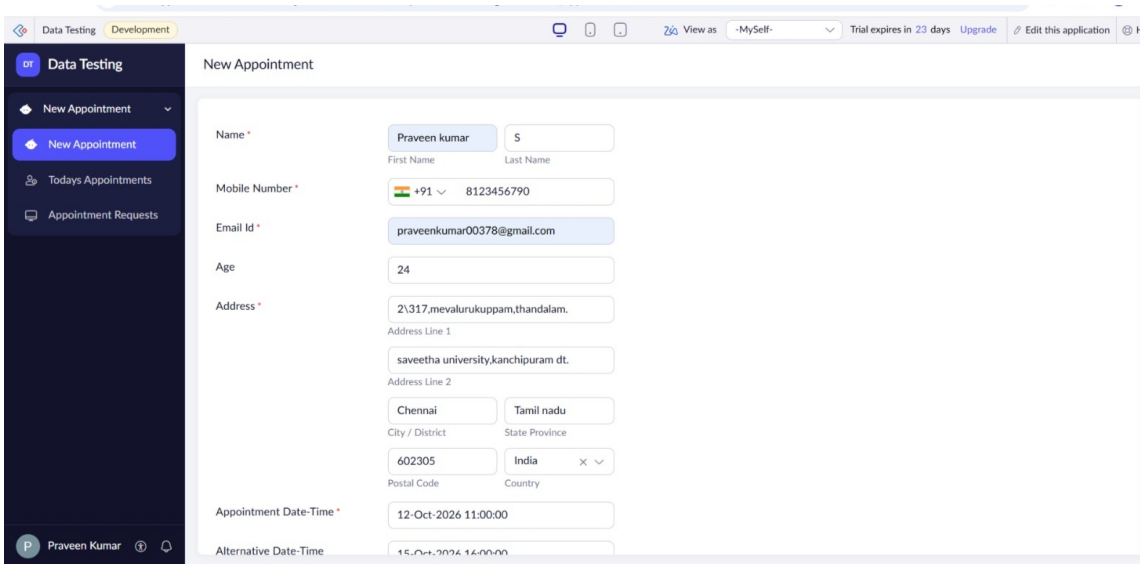

To create an Appointment Booking System using Zoho Creator as a cloud-based Software as a Service (SaaS) application.

PROCEDURE:

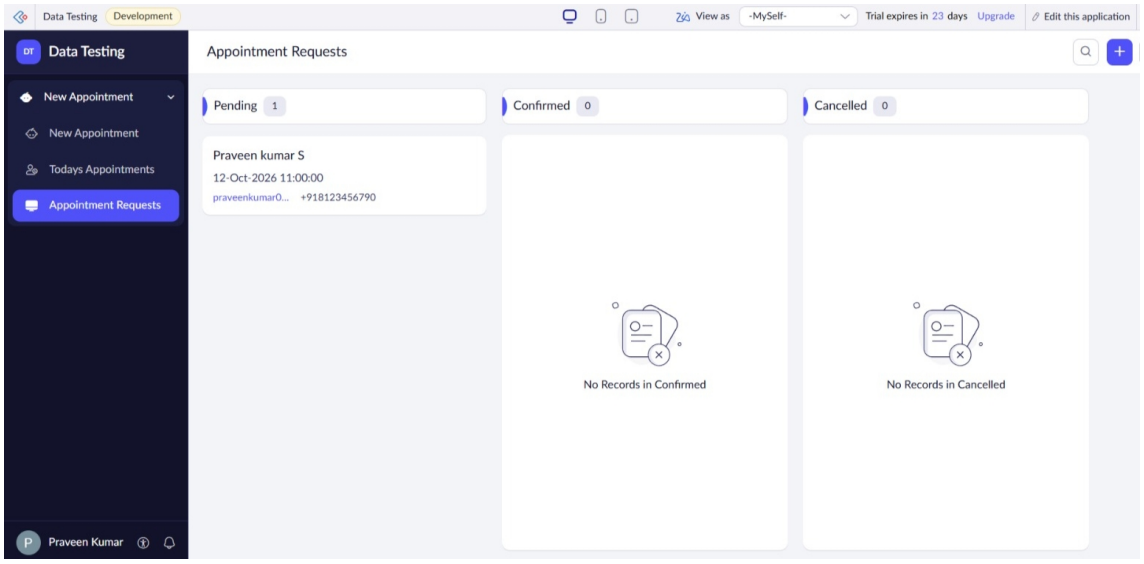

1. Log in to the Zoho Creator cloud platform.
2. Create a new application named **Data Testing**.
3. Create a form named **New Appointment**.
4. Add the required fields to the form:
    - Name (First Name and Last Name)
    - Mobile Number
    - Email Id
    - Age
    - Address (Address Lines, City, State, Postal Code and Country)
    - Appointment Date-Time
    - Alternative Date-Time
5. Configure the field types according to the required data, such as name, phone number, email, number, address and date-time fields.
6. Arrange the fields properly to make the form simple and user-friendly.
7. Save and publish the **New Appointment** form.
8. Enter sample patient details, including contact information and the preferred appointment date and time.
9. Submit the form to store the appointment details in the cloud.
10. Create a report named **Todays Appointments** to display the appointments of the day.
11. Create a Kanban report named **Appointment Requests** with the Pending, Confirmed and Cancelled status columns.
12. Verify the submitted personal details and the appointment date and time in the report.
13. Test the application by booking different appointments and confirming that the records appear in the correct status column.
14. Verify that the **Appointment Booking System** works successfully as a SaaS application.

IMPLEMENTATION

INPUT:

OUTPUT:

RESULT:

The **Appointment Booking System** was created successfully using Zoho Creator. Appointment details were stored in the cloud and displayed in the Appointment Requests report.
