LAB EXP 6

Payroll Processing System Using Zoho Creator (SaaS)

AIM:

To create a Payroll Processing System using Zoho Creator as a cloud-based Software as a Service (SaaS) application to manage employee salary details and calculate gross and net salary.

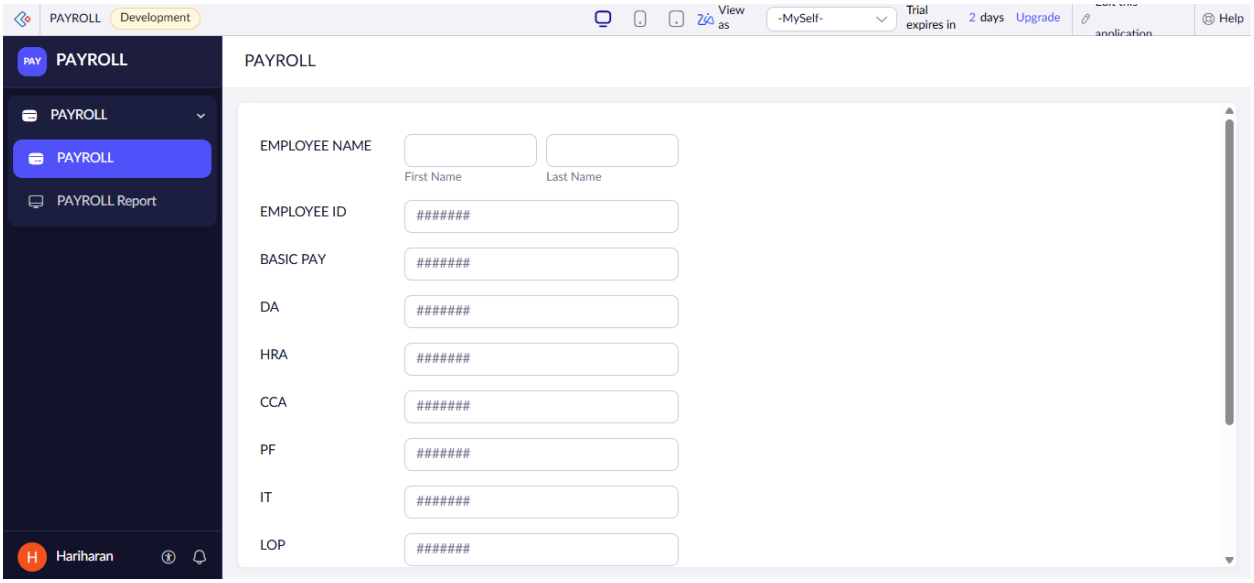

PROCEDURE:

1. Log in to the Zoho Creator cloud platform.
2. Create a new application named Payroll.
3. Create a form named Payroll.
4. Add the required fields to the form:
    - Employee Name (First Name and Last Name)
    - Employee ID
    - Basic Pay
    - DA (Dearness Allowance)
    - HRA (House Rent Allowance)
    - CCA (City Compensatory Allowance)
    - PF (Provident Fund)
    - IT (Income Tax)
    - LOP (Loss of Pay)
    - Gross Salary
    - Net Salary
5. Configure the field types according to the required data, such as name and number fields.

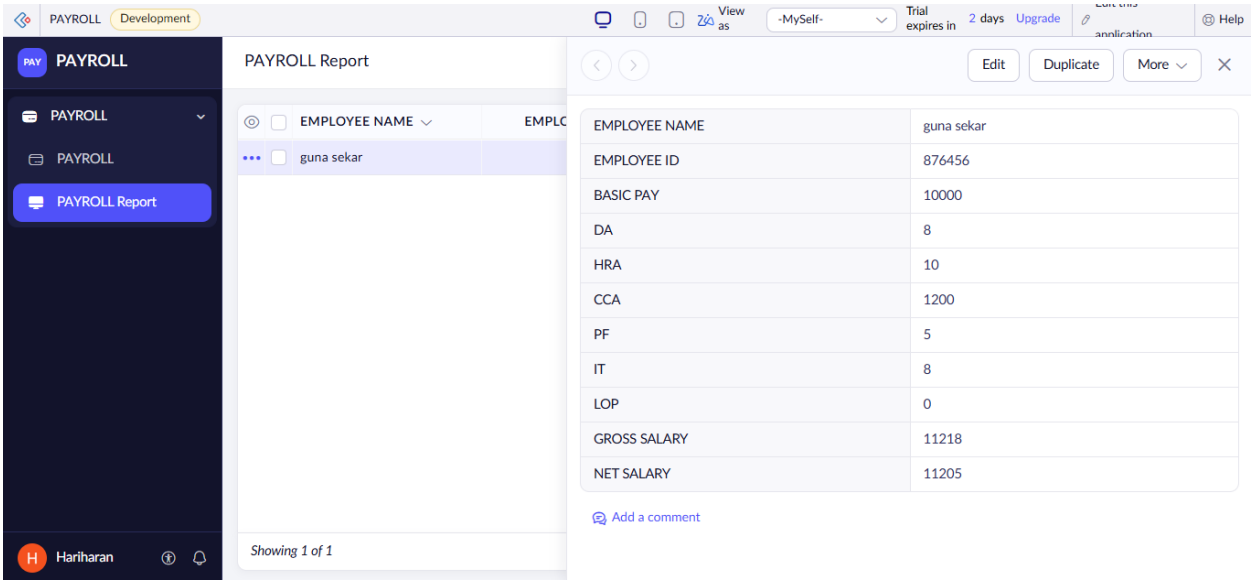

6. Enter the employee details, employee ID, basic pay, allowances, and deductions.
7. Calculate the Gross Salary by adding basic pay, DA, HRA, and CCA.
8. Calculate the Net Salary by subtracting PF, IT, and LOP deductions from the gross salary.
9. Arrange the fields properly to make the payroll form simple and user-friendly.
10. Save and publish the payroll form.
11. Enter sample employee salary details and submit the form to store the payroll information in the cloud.
12. Create a report named Payroll Report to display the submitted employee records.
13. Verify the employee's name, employee ID, salary components, gross salary, and net salary in the report.
14. Test the application using different employee salary details and verify that the records are displayed correctly.
15. Confirm that the Payroll Processing System works successfully as a SaaS application.

IMPLEMENTATION:

INPUT:

OUTPUT:

RESULT:

The Payroll Processing System was created successfully using Zoho Creator. Employee details, salary components, gross salary, and net salary were recorded and displayed in the Payroll Report.
